

Italicized page numbers indicate illustrative material.

## A

Abiogenesis, 20–25  
Acquired immune deficiency syndrome (AIDS). *see also*  
HIV (human immunodeficiency virus)  
origin, 88–89  
prevention, 97–98  
research methods, 43  
transmission, 91–93, 95  
treatment, 95–96  
vaccine development, 96–97  
Active acquired immunity, 29, 62, 76  
Active immunization, 29, 62, 76  
Adoptive immunotherapy, 81–83  
AIDS. *see* Acquired immune deficiency syndrome (AIDS)  
Allergies, 84–87  
Anthrax, 34–35, 98  
Antibiotics, 70  
Antibodies  
in AIDS, 91, 96  
in allergies, 84–87  
in cancer treatment, 82  
clonal selection theory, 73–76  
defined, 72  
discovery of, 45, 57  
hapten activity, 64  
in humoral theory, 56  
monoclonal, 76–78, 82  
in passive acquired immunity, 46, 55  
properties of, 58–59  
in prophylactic immunization, 62  
against smallpox, 29  
theories of, 72  
Antibody-based immunity, 47, 51–52, 56, 64  
Antigen-antibody reaction, 45, 72, 73  
Antigens  
in active acquired immunity, 29, 62, 76  
in AIDS, 96  
in allergies, 84–87  
in clonal selection theory, 73–76  
defined, 73  
discovery of, 57  
hapten activity, 64  
Antihistamines, 86  
Antisera, 59  
Antitoxins, 45  
Arachidonic acid, 87  
Aristotle, 20  
Attenuated forms, 29, 35, 36  
Autoimmune diseases, 84, 87–88  
AZT (azidothymidine), 95–96

## B

B cells, 73–74, 75, 76, 78, 84  
Bacteria  
bacteriophages, 68  
discovery of, 17–18  
disease-causing, 34–35  
and killer T cells, 74  
pure cultures of, 34, 42–43  
in viral cultures, 70  
vs. viruses, 36, 66, 67  
in wine making, 31  
Bacteriophages, 68  
Basophils, 85  
Beale, Lionel S., 40  
Behring, Emil von, 45–46, 51, 106  
Beijerinck, Martinus, 67–68  
Biologics, 76  
Biotechnology, 76  
Blood groups, 65  
Blood transfusions, 65, 91, 92, 95  
Bonomo, Giova Cosimo, 14, 17, 104  
Brucellosis (undulant fever), 63  
Bubonic plague, 62  
Budd, William, 40, 105  
Burnet, Macfarlane, 74, 107

## C

Cancer, 81–83  
Cellular (phagocytic) theory of immunity, 47–49, 52, 63–64  
Chemotherapy, 55, 71, 81–82  
Chicken cholera, 32, 34  
Children's Asthma Research Institute, 85  
Cholera immunization, 60, 62  
Chromosomes, 79, 80. *see also* DNA (deoxyribonucleic acid)  
Clonal selection theory, 73–76  
Clones, 73, 78  
Copeman, S. M., 68–69  
Cowpox, 26–27, 79  
Cultures  
bacteria-free, 70  
Koch's pure culture method, 42–43  
pure, 34  
tissue-culture techniques, 70

## D

Davaine, Casimir Joseph, 34  
de Graaf, Reiner, 17  
d'Herelle, Felix, 68  
Diphtheria, 43, 45

## Disease

- cause vs. treatment, 17
- early understanding of, 11
- germ theory of, 29, 35, 40, 43
- prevention, 34
- transmission, 32

DNA (deoxyribonucleic acid), 79, 80–81, 89

Douglass, Stewart, 63–64

## E

Effector function, 72–73

Ehrlich, Paul, 52–53, 54, 55, 106–107

Enders, John Franklin, 70–71, 107

Epidemiology, 57

Erythrocytes, 18

Essex, Myron, 97

Exotoxin, 51

## F

"Father of chemotherapy." *see* Ehrlich, Paul

"Father of immunology." *see* Pasteur, Louis

Filterable viruses, 67

Fisher, Emile, 64

## G

Gallo, Robert, 97

Galtier, Pierre Victor, 36

Gamma interferon, 83

Gene splicing, 79, 80

Gene therapy, 80–81

Genetic engineering, 76, 78–81, 83

Germ theory of disease, 29, 35, 40, 43

Germs, 22, 31. *see also* Microorganisms

Goodpasture, Ernest William, 69, 107

## H

Haffkine, Waldemar M. W., 59–60, 62, 107

Hanser, Armaur, 40, 105

Haptens, 64

Heidelberg, Michael C., 59, 107

Helmont, Jan Baptista van, 20, 104

Histamines, 86

HIV (human immunodeficiency virus), 88–89, 90, 91–93, 95–98. *see also* AIDS

HTLV-IV, 97

Humoral theory of immunity, 47, 51–52, 56, 64

Hybridomas, 76–78

Hydrophobia, 35–39

## I

IL-2 (interleukin-2), 82

Immune response, 47, 57, 72–73

Immune system disorders, 84–89

## Immunity

active acquired, 29, 62, 76

antibody-based, 47, 51–52, 56, 64

cellular (phagocytic) theory of, 47–49, 52, 63–64

conferred by cowpox, 27

early understanding of, 11–12

humoral theory of, 47, 51–52, 56, 64

passive acquired, 46, 55

## Immunization

active, 29, 62, 76

cholera, 60, 62

against diphtheria, 45

early attempts at, 12

prophylactic, 62

Immunochemistry, 64

Immunogens, 72, 73

Immunoglobulins, 59, 85

Immunosuppressants, 87–88

Immunotherapy, 81–83

Institute of Hygiene, 52

Interferon, gamma, 83

Interleukin-2 (IL-2), 82

Ishizaka, Kimishige, 85, 108

Ishizaka, Teruko, 85, 108

## J

Janssen, Zacharias, 14, 15, 18

Jenner, Edward, 26–27, 28, 29, 97, 98, 105

## K

Kerr, Randy, 61

Killed vaccines, 60, 62, 63

Kircher, Athanasius, 14, 16, 104

Kitasato, Shibasaburo, 45, 62, 106

Koch, Robert, 41–43, 44, 51, 67, 106

Koch Institute, 45, 52

Koch's Postulates, 42–43

Köhler, Georges, 76

## L

LAK (lymphokine-activated killer cells), 82

Landsteiner, Karl, 64–65

Laurent, Marie, 31

Leeuwenhoek, Antonie van, 17–18, 19, 104

Leprosy bacillus, 40

Leukocytes, 51, 73, 82

Lichtenstein, Lawrence, 86–87, 108

Lister, Joseph, 40, 105

Löffler, Friedrich, 67

Lymphocytes, 73, 82. *see also* B cells; T cells

Lymphokine-activated killer cells (LAK), 82

## M

Macrophages, 83  
Maitland, H. B., 69, 107  
Marton, Ladislaus Laszio, 70, 107  
Mast cells, 85  
"Material of life" (DNA), 79, 80–81, 89  
Meister, Joseph, 36, 39  
Memory cells, 76  
Metchnikoff, Élie, 48–49, 50, 106  
Microbes, 22, 31. *see also* Microorganisms  
Microorganisms  
    appearance under a microscope, 18  
    relationship with disease, 14, 17, 18, 29, 35  
    spontaneous generation of, 24–25  
Microscopes  
    electron, 69–70  
    invention of, 14, 15  
    microorganisms viewed by, 18  
    power of, 36  
Milstein, Césaire, 76  
Mites, 17  
Mithridates, 12, 104  
Monoclonal antibodies, 76–78, 82  
Montague, Lady Mary Wortley, 12, 13, 14, 27

## N

National Cancer Institute, 81  
Needham, John, 22, 24, 105  
Nelmes, Sarah, 27  
Nobel Prize winners  
    Behring, Emil von, 46  
    Burnet, Macfarlane, 74  
    Enders, John Franklin, 70  
    Landsteiner, Karl, 65  
Nuttall, George H. F., 51–52, 106

## O

Oldenburg, Henry, 17, 18  
Opsonins, 45, 64

## P

Paoletti, Enzo, 79, 107  
Passive acquired immunity, 46, 55  
Pasteur, Louis  
    abiogenesis experiment, 24–25  
    accomplishments, 98, 105  
    laboratory of, 37  
    life of, 29, 31–32  
    photo with wife, 33  
    silkworms, 32  
    sterilization experiments, 31–32  
    vaccination experiments, 34–35  
    viruses vs. bacteria, 36, 67  
Pasteur, Marie (Laurent), 31

Pasteur Institute, 43, 59, 60  
Pasteurization, 31–32  
Pathogens, 29, 58  
Pathology Institute, 64  
Patterson, Ray, 86, 108  
Pébrine, 32  
Peptide T, 97  
Pfeiffer, Richard F. J., 52, 63, 106  
Pfeiffer's phenomenon, 52  
Phagocytes, 45, 47, 48–49  
Phagocytic (cellular) theory of immunity, 47–49, 52, 63–64  
Phipps, James, 27, 28  
Plague, 10, 11, 14, 62  
Plasma cells, 73  
Poliomyelitis virus, 70  
Postulates, Koch's, 42–43  
Pure cultures, 34, 42–43

## R

Rabies, 35–39  
Receptors, 73  
Redi, Francesco, 21–22, 23, 105  
Reed, Walter, 68  
Reticuloendothelial system, 73  
Retrovir, 95–96  
Retroviruses, 89  
Rh (rhesus) factor, 65  
RNA (ribonucleic acid), 89  
Rockefeller Institute, 65  
Roux, Émile, 43, 45, 106  
Royal College of Physicians, 26  
Royal Society of London, 17, 18, 27

## S

Salk, Jonas, 70  
Scabies, 17  
SCID (severe combined immunodeficiency), 88  
Serotherapy, 46, 58  
Severe combined immunodeficiency (SCID), 88  
SFA (suppressive factor of allergy), 86  
Side chain theory, 56  
Side effects of treatment, 83, 96  
Silkworms, 32  
Smallpox, 12, 27, 29, 30  
Spallanzani, Lazzaro, 24, 105  
Specificity, antibody, 72, 74  
Spontaneous generation, 20–25  
Starfish experiment, 49  
Sterilization, 31–32  
Steroids, 86  
Suppressive factor of allergy (SFA), 86  
Systemic autoimmune diseases, 84, 87–88

## T

T cells, 73, 74, 76, 84  
Thucydides, 10, 11, 104  
Tissue-culture techniques, 70  
Tobacco-mosaic disease, 67, 70  
Toxin, diphtheria, 43  
Transfusions, blood, 65, 91, 92, 95  
Treatments, side-effects of, 83, 96  
Tuberculosis, 43, 44, 55  
Tumor necrosis factor, 83  
Twort, Frederick, 68  
Typhoid fever, 11, 40, 63, 70

## U

Undulant fever (brucellosis), 63

## V

Vaccination  
  AIDS, 96  
  anthrax, 35  
  bacterial infections, 59  
  defined, 29  
  smallpox, 27, 30  
  typhoid, 63  
Vaccine therapy, 62–63  
Vaccines  
  genetically engineered, 78–81  
  killed, 60, 62, 63  
  and mutating viruses, 96  
  tissue-culture techniques, 70  
Vaccinia, 79, 96–97  
Vanderbilt University, 69  
Variolation, 12–14  
Vectors, 68  
Viruses  
  vs. bacteria, 36, 66, 67  
  characteristics of, 67–68  
  filterable, 67  
  gene therapy, 80–81  
  growth requirements, 68–69, 70  
  retroviruses, 89  
  vaccines against, 70, 71

## W

White blood cells, 51, 73, 82. *see also* B cells; T cells  
Wine industry, 31–32  
Wright, Almroth Edward, 62–64

## Y

Yeast, 31  
Yersin, Alexandre, 43, 106

## Z

Zidovudene, 95–96
